

Diogo Silveira Viana

Frontend Developer · UI/UX

diogo.silveira.viana2003@gmail.com | Matosinhos, Portugal | +351 917 255 464

Profile

Recent MSc graduate in Informatics and Computing Engineering, focused on frontend development and UI & UX. Completed an internship at ITSector on a frontend team for a major Portuguese bank project, turning Figma designs into responsive pages using React and TypeScript.
With an engineering background and a strong interest in user experience and visual quality, I'm looking for a junior frontend developer role where I can keep growing in both development and design.

Experience

Frontend Developer Intern, ITSector, Porto
Feb 2024 — Jun 2024

- Built responsive production screens from Figma designs using React and TypeScript, ensuring accurate implementation of design specifications.
- Managed application state with Redux and Zustand, keeping data flow predictable as screens grew.
- Connected the UI to Node.js backend services as part of the frontend team.

Computer Vision Researcher, INESC TEC, Porto
Feb 2026 — Oct 2026

- Built a retrieval model in Python (PyTorch) that ranks breast cancer aesthetic outcomes, improving accuracy over the baseline.

Education

MSc, Faculty of Engineering of University of Porto, Porto
Sept 2024 — Oct 2026 · Grade: 17/20

ERASMUS+ Exchange Student, Technische Universität Wien, Vienna
Oct 2025 — Feb 2026 · Grade: 17/20

BSc, Faculty of Engineering of University of Porto, Porto
Oct 2021 — Jun 2024 · Grade: 15/20

Skills

- **Frontend** · HTML, CSS, JavaScript, TypeScript, React.js, Redux, Zustand
- **Database** · PostgreSQL, MySQL, SQLite
- **UI/UX & Design** · Figma
- **Mobile** · Flutter, Dart
- **Graphics** · WebGL, Three.js, D3.js
- **Backend** · Node.js, PHP
- **Programming Languages** · Python, C, C++, Java, C#
- **Version Control** · Git
- **Machine Learning** · PyTorch, scikit-learn, NumPy, Pandas, Matplotlib, Seaborn, Jupyter

Projects

ComPass (APPC) · React, Figma, WCAG 2.1 AA
Platform for the Associação do Porto de Paralisia Cerebral (APPC) that centralises functional profiles of people with functional diversity, connecting users, caregivers, and professionals. Frontend work: accessibility features following WCAG 2.1 AA and multi-role interfaces that adapt to the logged-in account type. Also helped design a Figma prototype of a future mobile app, built for presentation to APPC.

I**nteractive Sales Data Visualisation** · JavaScript, D3.js, HTML, CSS
Developed an interactive data visualisation dashboard for an online sales dataset, combining a choropleth map, annual revenue bar chart, calendar heatmap, and Sankey diagram. Implemented linked filtering and interactions across visualisations, including country selection, shipment-provider filtering, tooltips, zooming, and animated transitions to support exploration of sales and shipment patterns.

SWC News · Laravel, PostgreSQL, JavaScript, AJAX, HTML, CSS
A collaborative news website that allows users to share their news and, consequently, their opinions by commenting or using a voting system. Users are also able to establish friendships and filter their news based on this. Coded using Laravel, Bootstrap, AJAX, HTML, CSS, PHP, JavaScript, and PostgreSQL.

Ticket Support Website · PHP, JavaScript, SQLite, HTML, CSS
A website that allows users to create a ticket, exposing their problems to the website staff, then when the issue was attributed to a specific department and a subsequent staff member. The user could then chat through messages with the staff member assigned to the ticket until the issue was resolved and therefore closed.

HealthSync · Figma, UI/UX Design
Design of a health mobile app (with similar functionalities to SNS24) using Figma.

TreeDesigner · Flutter, Dart, Figma
A genealogy tree builder mobile app, with which users can easily build and customize their tree using intuitive tools and beautiful templates. Coded mainly in Dart, using Flutter.

Bee Simulator · WebGL, JavaScript
A 3D-modelled scenery consisting of an animated bee, a beehive, flowers, rocks, and animated grass. The user controls the bee through the environment, being able to pick up the pollen from the flowers and drop it in the beehive. Developed using WebGL.

Dissertation: Exploring Collaborative Image Retrieval Models for Predicting Breast Cancer Aesthetic Outcomes · Grade: 18/20 · Python, PyTorch, scikit-learn, NumPy, Pandas
A retrieval framework that brings collaborative filtering into multimodal image retrieval, jointly learning image-patient representations and query-candidate relevance to rank clinician-defined aesthetic outcomes. Developed in Python.
